2.0.1 New features, performance improvements, and fixes

July 27, 2022

New and enhanced features

- Fleet Operations – Statuses in Completed state have colored dots to indicate the outcome of each task (etc., All ATMs Successful, No ATMs Successful, and Some ATMs successful).
- Package Deployment/File Collection features now contain a comment section.
- Transactions expanded rows consist of a share button for users to copy and share a transaction link with others.
- Users can set their preferred language via My Account or header navigation.
- All Print and Export buttons have been improved.
- When modifying a task in new or completed state the user can now select the option to use the previous file from the originally created task for PF4 updates or in the event of a Windows update, the task will automatically populate with the previously selected Windows patch.

Bugfixes

- SJ-728 Fixed: Invalid email address information displaying in the "Check Your Email" dialogue.
- SJ-729 Fixed: Task deletion on Fleet Operations causes table to load endlessly.
- SJ-726: Fixed: Password validation showing improper feedback.
- SJ-749 Fixed: Missing communication issue analysis in Transaction analysis
- SJ-719 Fixed: Selection of CCSupport-all does not create a CCSupport-all task.
- SJ-751 Fixed: When searching a transaction and no result is returned, the previous search result stays instead of displaying "no results."
- SJ-755 Fixed: Failed transactions not appearing on Withdrawal Recon print/export reports.
- SJ-752 Fixed: DCC transaction is missing details.
- SJ-717 Fixed: Editing the package of a package deployment task fails.
- SJ-723 Fixed: Package Link does not download the package accordingly.
- SJ-757 Fixed: Fleet download links under "view details" of the task doesn't work.
- SJ-758 Fixed: Exporting in csv format from Transaction search, the "amount" column showed empty values, not reflecting the transaction information that are exported.
- SJ-756 Fixed: Failed transactions not appearing on Deposit Recon print/export reports.

- SJ-727 Fixed: Unusual behaviour for when users attempt to change personal email within SJ app.
- SJ-725 Fixed: Attempting to change back to an old password produces an unclear error message.
- SJ-724 Fixed: First and last name fields are marked as required when they are not.

Version Update

Chore: SJ versions update 1.5.3 to 2.0.1

3.0.15 New features, performance improvements, and fixes

June 16, 2023

New and enhanced features

- Report Portal: Users can collect newly generated reports and review a history of older reports.
- Auto-generated reports: Users can register for reports generated based on specific events.
- Enhanced Deposit Reporting: Users can access Deposit Reports and view/print in various formats.
- Dashboard Widgets: Implemented Dashboard Widgets for Package Deployment, File Collection, Withdrawal Failure, and Fleet Operations.
- ATM Group Management: Users can access and delete ATM Groups, assign groups to users, and view ATM Group assignments.
- Implemented a two-column view for ATM assignments for improved user experience.
- Alerts and Notifications: Users can subscribe to and manage alerts and notifications.
- Issue Reporting: Users can report issues directly from the SJ application.
- User Group Assignment: Updated "Create User" and "Import User" components to include the assignment of Groups.
- Alert Events Visibility: Users can now see various alert events in Alerts and Notifications.
- User Permissions: Added a page for managing user permissions as a system requirement.
- Implemented responsive navigation for improved user experience.
- Provided high-level analysis on Ticket Redemption transactions for users.

- Feature Access Management: Hide features disabled by SJL to prevent access for affected users.
- Enhanced Withdrawal Recon to include PT, BB, and TR transactions.
- Cash Vault Dashboard Results Sharing: Users can share results from Cash Vault dashboard.
- Improved search functionality by merging date and time fields in transaction search.
- Next State Code Selection: Added the option to select next state codes to query transactions.
- Angular material update to ng15.

Bugfixes

- SJ-761 Fixed: Issue when changing ATMs in Withdrawal Recon doesn't clear intervals properly.
- SJ-727 Fixed: Issue of hiding email from user account and disabling the option to change the user's email.
- SJ-717 Fixed: Issue with checking for previous packages without downloading the entire package.
- SJ-764 Fixed: Endless loading issue with ATM status task.
- SJ-763 Fixed: Issue with recon withdrawal details recalculation and refactoring.
- SJ-767 Fixed: Issue with repeating the collection task on the failed ATM not populating the ATM ID.
- SJ-859 Fixed: Deleted Groups showing up in the Search Bar dropdown.
- SJ-890 Fixed: Users can only remove their own comments from Fleet tasks.
- SJ-893 Fixed: Incorrect validation of fields in Edit ATM Details window of ATM Profile.
- SJ-915 Fixed: Create user doesn't redirect to user management page (loads forever).
- SJ-970 Fixed: Download failure for large files in file collection or deployment.
- SJ-973 Fixed: Navigation from Transaction page to other pages fails.
- SJ-985 Fixed: Reboot ATM option now supported on Package Deployment page.
- SJ-984 Fixed: Linked Alerts & Notifications to the BE.
- SJ-1107 Fixed: Dashboard for withdrawal recon displays all intervals accurately.
- SJ-1098 Fixed: Opening a share link for recon without assigned ATM leads to issues.

- SJ-1135 Fixed: Replenishment data not showing in dialog windows in Withdrawal reconciliation.
- SJ-1148 Fixed: Withdrawal Hyosung transactions not delivered to reconciliation.
- SJ-1157 Fixed: Share transaction link doesn't display date/time.
- SJ-1245 Fixed: Merged date and time fields in transaction search.
- SJ-1252 Fixed: Use previous file checkbox only active for PF4 Update task type.

Version Update

Chore: SJ versions update 2.0.1 to 3.0.15

3.0.17 New features, performance improvements, and fixes

June 30, 2023

New and enhanced features

- Adjusted Dashboard accessibility based on User permissions.
- Prevented unauthorized access to developer tools, except for super-admins managing user page access.
- Restricted User Management access to admins only.
- Limited Group Management tab access to admins.
- Restricted Fleet Operations pages to admin access.
- Limited access to Fleet Operations task details under ATM profile to admins.

Bugfixes

- SJ-1259 Fixed: Widgets not loading data when added via "Add Widget."
- SJ-1560 Fixed: Columns disappearing in "Edit Layout" mode after widget addition.
- SJ-1261 Fixed: "Add Widget" list not updating after "Cancel" click.
- SJ-1299 Fixed: "Add Widget" issue in column viewing after addition.
- SJ-1387 Fixed: Deleting all alerts/notifications does not properly update the alerts/notification icon content.

Version Update

Chore: SJ versions update 3.0.16 to 3.0.17

3.0.20 New features, performance improvements, and fixes

July 18, 2023

New and enhanced features

- Added translations for new analysis flags.
- Enhanced styling for dropdown options and language switcher.
- Enhanced styling for mat-chips.
- Made side navigation bar scrollable.
- Updated ATM management table values.
- Enhanced flexibility in currency symbols for cash balance column.

Bugfixes

- SJ-1308 Fixed: Failed Transactions widget not displaying results.
- SJ-1325 Fixed: Session Timeout Warning Screen appearing during use on foreign hosts and session timer not updating properly.
- SJ-1326 Fixed: ATM list data update problem on the ATM management page reload.
- SJ-1338 Fixed: Dashboard Reconciliation widgets not displaying dots for Hyosung ATMs.

Version Update

Chore: SJ versions update 3.0.18 to 3.0.20

3.0.21 New features, performance improvements, and fixes

July 18, 2023

New and enhanced features

- Enhanced Tools page resolution.

Version Updates

Chore: SJ versions update 3.0.21

3.0.23 New features, performance improvements, and fixes

August 1, 2023

New and enhanced features

- Enhanced Hyosung Fund Messages

Bugfixes

- SJ-1350 Fixed: Reconciliation calendars not displaying the correct date range for the selected interval.
- SJ-1387 Fixed: Deleting all alerts/notifications doesn't properly update the alerts/notification icon content.

Version Update

Chore: SJ versions update 3.0.21 to 3.0.23

3.0.24 New features, performance improvements, and fixes

August 4, 2023

New and enhanced features

- Implementation of retraction completion message for Hyosung ATMs.
- Introduced a new analysis message called "Present Timeout."

Bugfixes

- SJ-1387 Fixed: Issue with incomplete update of alerts/notification icon content upon deleting all alerts/notifications.
- SJ-1363 Fixed: Resolved interval selection problem with multi-segment in Withdrawal Recon link after page refresh.
- SJ-1389 Fixed: Corrected issue where certain ATMs resulted in blank alert/notification content and subject lines.
- SJ-1398 Fixed: Dashboard's failed withdrawal widget no longer retains outdated transactions when switching selected ATM.
- SJ-1404 Fixed: Rectified the inability to deselect multi-segment dates on Withdrawal Reconciliation calendar.

Version Update

Chore: SJ versions update 3.0.24

3.0.32 New features, performance improvements, and fixes

August 17, 2023

Bugfixes

- SJ-1414 Fixed: Cheque Deposited amount decimal incorrect.
- SJ-1403 Fixed: ATM Management "Groups" do not appear within the ATM ID/GROUP dropdown list consistently upon initial page load in ATM Management.

Version Update

Chore: SJ versions update 3.0.25

3.0.28 New features, performance improvements, and fixes

October 5, 2023

New and enhanced features

- Notifications should display the date and time matching the triggering event.
- Developers should have the ability to use MongoDB as a data source for reports.
- Improvement: Enhance the analysis of Hyosung Refund/Returned processes.
- PT: Update "Inconclusive" TRX result to reflect card data readability when necessary.

Bugfixes

- SJ-1387 Fixed: Alerts/notifications deletion doesn't update the icon content correctly.
- SJ-1420 Fixed: Deposits incorrectly appearing in the wrong transaction.
- SJ-1443 Fixed: Thousands of separators missing in deposits and balances.
- SJ-1451 Fixed: "Ticket Purchase" in the TRX. TYPE column is now capitalized.
- SJ-1454 Fixed: Refreshing transaction page no longer breaks ATM GROUPS into individual ATMs.
- SJ-1458 Fixed: Resolved cash emulation/cash-in error, inconclusive no more.
- SJ-1463 Fixed: Dispute ID 85772 - Inconclusive status corrected to "Failed Deposit."
- SJ-1464 Fixed: Dispute ID 86146 - Inconclusive status corrected to "Failed Deposit."

- SJ-1465 Fixed: Dispute ID 86301 - Inconclusive status corrected to "Failed Deposit."
- SJ-1466 Fixed: Dispute ID 85849 - Inconclusive status corrected to "Failed Deposit."
- SJ-1467 Fixed: Dispute ID 86307 - Inconclusive status corrected to "Failed Deposit."
- SJ-1472 Fixed: "ATM ID/GROUP" drop-down in "ATM Management" now handles empty assignments properly.
- SJ-1478 Fixed: PT - ccsupport download link reliably initiates file downloads.
- SJ-1481 Fixed: Inconclusive status now accurately reflects a failed cash deposit and return.
- SJ-1485 Fixed: Dollar sign no longer appears when there is no transaction amount.
- SJ-1491 Fixed: The error in the console when polling for alerts with no new alerts has been resolved.
- SJ-1492 Fixed: Sequence number field in transaction search now allows more than 4 digits for TR and BB transactions.
- SJ-1498 Fixed: Dispute ID 84959 - Inconclusive status corrected to "Failed Deposit."
- SJ-1500 Fixed: NSF and successful withdrawal logs separated.
- SJ-1506 Fixed: Dispute ID 86380 - Inconclusive status corrected to "Failed Deposit."
- SJ-1507 Fixed: Dispute ID 86864 - Inconclusive status corrected to "Failed Deposit."
- SJ-1509 Fixed: Dispute ID 84832 - Inconclusive status corrected to "Failed Deposit."
- SJ-1510 Fixed: Dispute ID 84580 - Inconclusive status corrected to "Failed Deposit."
- SJ-1511 Fixed: Dispute ID 84877 - Inconclusive status corrected to "Failed Deposit."
- SJ-1512 Fixed: Dispute ID 85403 - Inconclusive status corrected to "Failed Deposit."
- SJ-1513 Fixed: Dispute ID 85111 - Inconclusive status corrected to "Failed Deposit."
- SJ-1514 Fixed: Dispute ID 86645 - Inconclusive status corrected to "Failed Deposit."

- SJ-1515 Fixed: Dispute ID 87052 - Inconclusive status corrected to "Failed Deposit."
- SJ-1516 Fixed: Dispute ID 87413 - Inconclusive status corrected to "Failed Deposit."
- SJ-1520 Fixed: The refresh button on the ATM management page now correctly refreshes cassette status.
- SJ-1525 Fixed: Multi-deposits display the correct total value in deposit reconciliation.
- SJ-1527 Fixed: Failed deposits now show the items attempted for deposit in transaction search.
- SJ-1528 Fixed: Customer failed cheque deposit no longer inconclusive, unknown.
- SJ-1557 Fixed: TRX Type column now consistently displays "Unknown" in all caps.

Version Update

Chore: SJ versions update 3.0.26 – 3.0.28

3.0.30 New features, performance improvements, and fixes

October 20, 2023

New and enhanced features

- Implemented Vault feature that enables users to process bags via the CIT Vault page.
- Enhanced the Permissions page with custom access for the Vault feature.
- Implemented a summary page for the Vault for user convenience.

Bugfixes

- SJ-1504 Fixed: Dispute ID 84676 - Inconclusive is a failed deposit.
- SJ-1506 Fixed: Dispute ID 86380 - Inconclusive is a failed deposit.

Version Update

Chore: SJ versions update 3.0.29 – 3.0.30

3.0.32 New features, performance improvements, and fixes

October 31, 2023

New and enhanced features

- Added the ability for users to scan and complete CIT bag counts.
- Enabled users to select "check" as a bag option and provide a count for checks in the bag.
- Distinguished ATM Sweep transactions with a different color and excluded them from Replenishment-to-Replenishment dates.
- Implemented a feature for supervisory users to verify and submit CIT Session bags.
- Users can now navigate to the last record and back to the first record for improved efficiency.
- Added validation to count fields in the Add Details window to enhance data accuracy.
- Streamlined the user interface by removing the search button and ATM ID field.
- Eliminated the Add Row button for a more straightforward workflow.
- Enhanced the styling of toast messages for a more visually appealing user experience.
- Improved the vault feature by consolidating it into a single page, providing a better overall user experience.
- Increased data retrieval speeds on Package Deployment and File Collections widgets

Bugfixes

- SJ-1428 Fixed: Notifications generated by the backend are missing ATM information
- SJ-1482 Fixed: Cheque was invalid, incorrect deposit amount shown.

Version Update

Chore: SJ versions update 3.0.31 – 3.0.32

3.0.33 New features, performance improvements, and fixes

November 2, 2023

New and enhanced features

- Enabled supervisory users to verify and submit CIT Session bags.
- Implemented the ability for users to view the bags they scanned during the current user session.
- Added an endpoint to retrieve day journals for system use.

Bugfixes

- SJ-1636 Fixed: Check deposits with more than 9 checks don't load.

Version Update

Chore: SJ versions update 3.0.33

3.0.38 New features, performance improvements, and fixes

November 20, 2023

New and enhanced features

- Enabled the system to reparse ATM transactions using a flag for BE service automation.
- Provided users with the capability to view date/time/person information for bags collected and counted in the vault summary.
- Implemented the option for admins to re-send SmartJournal invites when the current invite expires, without the need to delete and recreate users.
- Empowered Super Admins to reparse groups of ATMs for improved efficiency.
- Added validation to the count fields in the Add Details window for enhanced data accuracy.
- Introduced the ability for users to add bags to a current open session of CIT bag collection.
- Enabled users to see the number of bags counted in an open session for better tracking.
- Implemented the selection of shortcut keys for capturing the type of bag, enhancing user convenience.
- Granted users with vault permissions the capability to delete and edit bags in the vault summary.

- Updated the Frontend (FE) to include two new attributes for withdrawal reconciliation, specifically for reversals and authorized transactions.

Bugfixes

- SJ-1428 Fixed: Notifications generated by the BE now include accurate ATM information.
- SJ-1582 Fixed: The display issue where cheques with INVALIDBUNCH error were showing up incorrectly.
- SJ-1616 Fixed: The discrepancy in Deposit Recon where Deposit Cheques value was off from the view details window.
- SJ-1622 Fixed: Cheque amount was missing a zero in the deposit breakdown.
- SJ-1623 Fixed: Issue where the cheque amount was missing the whole decimal in the breakdown window.
- SJ-1654 Fixed: Inaccurate reconciliation during deposit review after unchaining.

Version Update

Chore: SJ versions update 3.0.34 – 3.0.38

3.0.42 New features, performance improvements, and fixes

December 2, 2023

New and enhanced features

- Admins now have the option to delete or archive ATMs, providing enhanced control and management.
- Implemented admin user capabilities to perform actions like delete, archive, and restore ATMs directly from the front-end (FE), streamlining management processes.
- Added functionality to restart SmartJournal Client directly from the SmartJournal UI, improving user convenience.
- Developed TestNG-Selenium automation scripts for the Vault component, facilitating automated testing processes.
- Enhanced the ATM Management page to display per-cassette count and amount, improving overall visibility.
- Identified Interactive Teller Transactions and ensured their correct display in transaction search for improved accuracy.

Bugfixes

- SJ-1663 Fixed: Bag value total doesn't auto update until after bags are verified/submitted.
- SJ-1664 Fixed: Bags modified by admin reset to previous amounts after verification.

Version Update

Chore: SJ versions update 3.0.39 – 3.0.42

3.0.47 New features, performance improvements, and fixes

December 22, 2023

Enhanced Features

- Introduced session transaction mix functionality to the Transactions page.
- Continued and completed DevOps configurations & development.
- CIT Vault bags now reflect on Deposit Recon for the counted period.
- Added the ability for a vault admin user to select an ATM interval when verifying counts.
- Set 'Failed Deposit' unchecked as the default option for users.
- Provided direct access to the user guide and release notes from SJ.
- Sorted drop-down fields alphabetically and made them searchable for enhanced user efficiency.
- Added filter functions to the Permissions page for sorting users by their level.
- Displayed the Bag Type column in the summary for Vault users.
- Ensured cheques captured from the vault match deposit cheque values, not just cheques collected.

Version Update

Chore: SJ versions update 3.0.43 – 3.0.47

3.0.49 New features, performance improvements, and fixes

February 16, 2024

Enhanced Features

- Implemented a feature for the system to receive the DH transaction result of each transaction (BE/FE).
- Updated notification timestamps to match the exact date/time of the event that triggered them.
- Added display features to ATM Management page to show per cassette count and amount.
- Launched a smart-alerting microservice to facilitate communication of alerts across applications.
- Introduced DevOps developments for SmartJournal enhancements.
- Integrated cash forecasting capabilities into the SmartJournal (SJ) system
- Transitioned the interpreter to operate as a microservice.
- Enhanced user experience by clearing the URL along with the transaction search.
- Implemented visible indicators to reflect outcomes of transaction sessions.
- Enhanced the efficiency of transaction withdrawal fetching.

Bug Fixes:

- SJ-1707: Enhanced functionality to allow exporting of filtered ATM groups with outputs limited to those groups in Excel/PDF formats.
- SJ-1708: Enabled capability to print filtered data directly from the group management table.
- SJ-1710: Fixed issue to ensure that selected pie chart elements remain highlighted when the reload button is clicked in ATM management.
- SJ-1723: Resolved tabbing issue in the 'Add Details' dialog to keep the cursor within the dialog when pressing the tab key.
- SJ-1726: Improved the bag deletion confirmation dialog so that clicking outside the dialog will now close it.
- SJ-1731: Addressed and corrected malfunctioning alerts and notifications.
- SJ-1732: Updated interval selection in CIT Session verification to include sessions older than 2 weeks.
- SJ-1734: Fixed the truncated results message in transaction search to properly update when session changes occur.

- SJ-1746: Resolved issues with exported and printed transaction file details appearing empty/null.
- SJ-1785: Adjusted ATM Management page to display ATM status as red in cases of empty or malfunctioning cassettes.gfixes

Version Update

Chore: SJ versions update 3.0.48 – 3.0.49

3.0.57 New features, performance improvements, and fixes

April 8, 2024

New Feature:

- Single Sign-On (SSO) implementation to streamline user authentication processes.

Enhanced Features

- Implemented Unsuccessful Withdrawal Reconciliation on at least 2 ATMs.
- Added user capability to hide and expand fields in the Transaction Search interface.
- Enhanced Smart-Client system to communicate with a dedicated communication server.
- Updated functionality so deselecting 'Deposit Counter Cleared' or 'Deposit Sweep' removes intervals from the 'SELECT INTERVAL' dropdown.
- Enhanced the Withdrawal Recon page to include an option for displaying CIT bag counts.
- Enhanced transaction visibility for users, providing more detailed information on unknown transactions involving balance checks of power chequing accounts.
- Configured the SmartJournal AWS Development environment for improved development and testing processes.
- Improved transaction identification process, enabling users to spot transactions more easily with no response.
- Revised client interface to withhold Email options until completion.
- Enabled alphanumeric search capabilities for ATM selection in the Recon process.

Bug Fixes:

- SJ-1678: Corrected sorting functionality in transaction search columns.
- SJ-1825: Resolved issues in deposit reconciliation where exported files did not accurately reflect cash differences.
- SJ-1830: Fixed the error causing transaction links to sometimes load incorrect, nearby transactions.
- SJ-1838: Addressed the issue in deposit reconciliation where failed transactions would get stuck and lose data.
- SJ-1876: Enhanced account summary checks to display available balance for transactions.
- SJ-1880: Updated terminals to show available balance on successful transactions.
- SJ-1883: Improved transaction receipt formatting to display only one set of dotted lines above 'Amount Total'.
- SJ-1893: Modified ATM labels to display "EMPTY" for ATMs with empty cassettes, facilitating easier verification without the need to expand details.
- SJ-1899: Enabled verification of exported subtotals against the presented total withdrawal on ATMs.
- SJ-1903: Added functionality for users sharing deposit reconciliation intervals to share the interval itself.
- SJ-1939 [SAS-35]: Fixed an issue where the ATM Transaction Search was not returning results.
- SJ-1945: Ensured that Deposit recon CIT bags only display deposits, correcting previous display errors.
- SJ-1951: Corrected display errors in deposit reconciliation that showed December intervals in February.
- SJ-1981: Resolved errors encountered during the exporting of files in withdrawal reconciliation.

Version Update

Chore: SJ versions update 3.0.50 – 3.0.57

3.0.60 New features, performance improvements, and fixes

April 17, 202

Enhanced Features

- Enhanced Feature Enabled cash forecasting visualization for ATM users across 5 ATMs.
- Provided functionality for users to import CIT Bag information, streamlining the reconciliation process and enhancing data management capabilities.
- Updated the transaction analysis tool to allow users to filter out transactions cancelled by the host, refining the analysis capabilities.
- Set the default date in all date pickers to today's date, ensuring a more intuitive user experience and reducing manual date entries.
- Enhanced the visual clarity of rows in Grid Charts, improving usability and data readability for users.
- Refined the transaction interface to display only summaries, simplifying the user interface and focusing on key transaction details.

Bug Fixes:

- SJ-1588: Addressed issues where some ATM journals were either not uploaded or not parsed for several days.
- SJ-1607 SAS-23: Resolved the problem of missing transactions in Smart Journal from early October.
- SJ-1667 SAS-25: Corrected recurring failures in Morongo Logs processing.
- SJ-1783 SAS-30: Fixed multiple failures in log extraction tasks with online machines.
- SJ-1790 SAS-31: Addressed multiple failures in logs extraction involving GA0006 and GA005 machines.
- SJ-1886 Improved functionality to enable successful downloading of some ccsupport files.
- SJ-1948: Corrected the procedure for capturing SOP withdrawal cassettes in Hyosung ATMs, ensuring accurate data recording.

Version Update

Chore: SJ versions update 3.0.57 – 3.0.60

3.0.63 New features, performance improvements, and fixes

May 02, 2024

Story Enhancements:

- **MMGSC Client Customization and Branding:** Introduced customization and branding options to meet specific client requirements, enhancing user experience and corporate identity alignment.

Improvements:

- Improved handling of multiple sequence numbers in a single transaction to simplify tracking and analysis.
- Enhanced visibility of inconclusive transactions by providing definite conclusions to users.
- Expanded transaction details to show the accounts involved in transfers both from and to, increasing transparency for users.
- Updated transaction settings to default displaying 50 transactions per page, improving navigation and usability.
- Populated transaction receipts with relevant information for Mini statement-type transactions, enhancing detail and utility.
- Provided functionality for clients to view ATMs associated with selected time zones, facilitating better operational oversight.
- Enhanced the navigability and utility of Release Notes and User Guide by improving footer links.
- Implemented daily forecasting to provide more immediate and actionable financial insights.
- Upgraded the interface for Cash Forecasting Users to better explain 'the Story', improving user understanding and interaction with forecasting features.

Bug fixes

- SJ-1832: Resolved an issue so that the failed withdrawals tab in reconciliation now correctly displays only failed transactions.

- SJ-1905: Updated the deposit reconciliation export process to include comprehensive data for both cheque and cash deposits, rather than partial sums.
- SJ-1999: Enhanced system interaction, enabling users to access previously missing transactions.
- SJ-2003: Fixed transaction parsing errors that occurred when users switched views, ensuring accurate display and functionality.
- SJ-2010: Corrected a defect where Reconciliation page share links led to a blank page, now ensuring that these links properly display the intended content.
- SJ-2032: Improved the translation of transaction conclusions for more clarity.

Version Update

Chore: SJ versions update 3.0.61 – 3.0.63
